ACTUARIAL EXAMS

Exam P

Sitting July 2026

Exam FM

Planned October 2026

Exam SRM

Planned January 2027

TECHNICAL SKILLS

Actuarial & Analytics: Excel/Google Sheets (pivot tables, VLOOKUP, scenario modeling), SQL (PostgreSQL, MySQL), Python (pandas, numpy, scipy, statsmodels)

Data Engineering & Cloud: Azure Data Lake, Azure Databricks, Azure Data Factory, Power BI, REST APIs

Programming & Tools: Python, SQL, TypeScript, C++, JavaScript, Jupyter, Git, Selenium, Playwright, Pytest, Gemini Notebook LM, Github Copilot

PROFESSIONAL EXPERIENCE

HNTB & FDOT

April 2025 – Present

BI Developer / Data Analyst

- Developed SQL, Python, and VBA-based analytics and automation pipelines to reconcile traffic and pricing data between source systems and reporting layers, reducing manual validation effort by ~60% and improving data reliability for statewide decision-making
- Analyzed statewide traffic and Dynamic Message Sign (DMS) datasets to validate operational accuracy across 28 transportation subsystems, supporting FDOT's traffic management and pricing strategies for express lanes
- Designed reusable validation frameworks and dashboards to surface SLA risks, trend anomalies, and release readiness metrics, accelerating test and release cycles across three statewide deployments (2 SunGuide hotfixes, 1 SELS release)
- Partnered directly with FDOT stakeholders, developers, and BI teams to translate business and operational requirements into measurable data checks, curated datasets, and reporting outputs used by internal and external consumers
- Supported ingestion and transformation of 20+ enterprise datasets, ensuring accuracy and consistency across reporting workflows used for operational monitoring and client-facing dashboards
- Leveraged LLM-assisted documentation analysis (self-hosted Ollama, Gemini Notebook LM) to extract requirements and generate structured validation artifacts, improving analysis throughput and accelerating development timelines by 40%+

Shop Online New York

Feb 2025 – Apr 2025

Software Developer Intern

- Built a cross-platform Flutter application supporting four role-based user types, implementing access controls and structured data flows to reduce authorization defects and improve system reliability
- Integrated Firebase for real-time data ingestion, authentication, and storage; managed the full Jira ticket lifecycle, translating functional requirements into deliverable features

Florida State University

Sep 2023 – May 2024

Cybersecurity Analyst Intern

- Standardized security and compliance controls for FSU Health Research teams, aligning workflows to NIST 800-53 and FedRAMP Moderate, reducing audit preparation effort and compliance ambiguity
- Conducted risk assessments and control gap analysis across Azure and Alert Logic integrations, evaluating identity management, logging, and data protection controls for health data systems

Mathnasium

Sep 2022 – Aug 2023

Mathematics Tutor

- Delivered individualized mathematics instruction from arithmetic through calculus II, improving student performance by an average of one letter grade through structured problem-solving methods
- Prepared students for college admission exams, achieving 20%+ average score improvement, demonstrating ability to translate complex quantitative concepts into clear, accessible explanations

DATA & ANALYTICS PROJECTS

AI-Driven Test Case Generation Pipeline — *Azure DevOps · Ollama · LLMs*

- Built an automated pipeline leveraging the Azure DevOps REST API and self-hosted LLMs (Ollama) to ingest requirements, resolutions, and Jira artifacts and generate structured, reusable validation outputs
- Established requirement-to-release traceability, improving per-release coverage and reducing manual analysis effort while strengthening auditability and change-impact assessment

SJM Automotive Manufacturing & Dealer Sales Analytics — *Azure Databricks · Power BI*

- Built an end-to-end Azure data platform to ingest and transform multi-source enterprise data, applying data quality checks and governance controls
- Delivered curated analytical datasets and Power BI dashboards to support operational performance monitoring and sales insight

Enterprise SLA Monitoring Data Platform — *Azure Databricks · Medallion Architecture*

- Designed a Medallion-architecture pipeline ingesting application decision data into ADLS, applying SLA classification logic in Databricks (Spark SQL), and publishing Gold-layer reporting tables
- Implemented automated data validation and reconciliation at each pipeline stage, ensuring end-to-end accuracy, auditability, and reliability for operational and client-facing reporting

EDUCATION

Florida State University, Tallahassee, FL.

Dec 2024

B.S. Computer Science

GPA: 3.46 / 4.0

Relevant Coursework: Introduction to Probability, Business Statistics, Calculus I–III, Discrete Mathematics I & II, Data Structures, Operating Systems
